

Case Study: Seamless Flooring Systems

Phased Flooring Installation for Leading Midlands Press Manufacturer

Client: Leading Stampings & Pressing Manufacturer

Project: New Production Area – Epoxy Floor Coating

Project Value: £28,000

Products: KDR Epocoat High Build Slip-Resistant Epoxy Coating

Area Coverage: 1,100 sq. m

Commencement: June 2024

Project Duration: 3 Weekends

Client Requirements

Zenith Contract Services was commissioned by a leading Midlands-based manufacturer specialising in stampings and pressings for the automotive industry. The client required a durable, low-maintenance floor solution for a newly developed production area. Due to the nature of their operations, minimising disruption to daily output was a key priority.

Our Solution

To accommodate the client's busy schedule, the project was carefully phased. This allowed operations to continue uninterrupted while essential flooring upgrades were carried out. Each phase involved full preparation and coating of designated sections, enabling seamless handovers and continuity of business activity.

After

Further details can be found on the following page.

Zenith began by preparing the existing substrate using diamond grinding equipment. This critical step removed all old floor coatings and contaminants, while also creating a textured surface to ensure maximum adhesion for the new coating system.

We then applied KDR Epocoat High Build Slip-Resistant Epoxy Coating — a robust, industrial-grade product ideal for environments exposed to mechanical loads, oil, and chemical spills. The chosen system not only delivers long-lasting durability but also improves safety through its slip-resistant finish, critical in high-traffic production environments.

Outcome

The project was completed to a high standard, with all phases delivered on time and within budget. The client was highly satisfied with the results, noting the visual improvement, ease of maintenance, and the non-slip properties of the finished floor. Following the success of this installation, further flooring upgrades are already in discussion with the client.

This project is another example of Zenith's commitment to flexible, high-quality flooring installations for the manufacturing and automotive sectors. From detailed preparation to phased delivery, our team ensures every project meets the technical and operational demands of our clients.
