

## Case Study: Zenith Refitment

# New cycle store & shower block for Nationwide Building Society

Client: Nationwide Building Society

Project: Cycle store and associated shower block

Contract period: 24 weeks

Contract value: £290,000

### Project Description

Zenith Refitment Services was employed by Nationwide Building Society to construct an 88-cycle capacity store with associated shower block. The project involved working to a developing brief with significant amendments to the scope of works during the contract period.

Initially, the job saw the team removing all existing landscaping, including large trees and grass, and adjusting ground levels to accommodate new footpaths and a cycleway. They were also required to install new foul and storm drainage into the current systems, and new water and power supplies.

The works included the formation of building foundations and construction of a steel frame with polycarbonate roof and glazed wall panels to house the cycle store, along with the installation of power, heating and lighting.

The construction of the new shower block required Zenith's team to install an air source heat pump and underfloor heating. They also installed showers and cubicles, along with a toilet facility, and resin flooring throughout, including the shower drains.

Further images are featured on the following page.

PVC washable wall panels were also fitted, as well as benches hand dryers and hairdryers.

Finally, the team carried out landscaping around the new cycle store and shower block, to accommodate the new footpaths and cycleway.

The project is testament to Zenith Refitment's capability to meet the on-going requirements of the brief, working to the highest quality standards and providing a seamless service from initial preparatory works through to final decoration.
