

Case Study: Zenith Refitment

Creative Pod Design & Build

Client: HPL Prototypes

Project: Constructing New Creative Pod

Contract period: 10 days

Contract value: £10,000.00

Project Description

Zenith Refitment Services were approached by HPL Prototypes to build a new Creative Pod within their existing Design Studio. The Creative Pod will form a space for designers to experiment with materials and textures to create automotive interiors for clients such as Aston Martin and Bentley.

The works involved constructing a freestanding framework, consisting of metal frame and plasterboard partitioning, and a seamless glazed section with opposing doors to allow for the flow of designers in and out of the room. The area had to penetrate through an existing suspended ceiling grid, therefore had to be adjusted to accommodate the structure to give a freestanding appearance.

Works carried out

Construction Electrics
Glazing Decorating
Carpentry

This was the latest in a long line of successful projects completed for our clients at HPL Prototypes.
