

Case Study: Refurbishment Services

Repairing and repainting median curbs and bollards

Client: Logistics Company, Oxfordshire

Project: Repair and repaint curbs and bollards

Product Value: £3,700

Products: Coovar Fluorescent Paint & protective glaze

Commenced: June 2024

Works Duration: 4 days

Project Description

A logistics company in Oxfordshire required the existing concrete median curbs and bollards located within roadways around the site to be repaired and repainted. The various barriers needed to stand out to drivers, ensuring they adhered to safety systems and maintained an appropriate distance between the curbs/bollards and site vehicles, thereby ensuring vehicle safety.

The job required minor repairs to be carried out to the concrete substrate, prepare the surfaces and repaint the median curbs and bollards. As this involved working within a live site, situated within carriageways, coordination and visibility was essential to ensure operative safety.

Coovar was specified due to its suitability for exterior use and available in bright fluorescent colours, with green and white selected, as had been used originally. A clear, heavy duty protective glaze was then applied over the paint finish, providing protection against road usage and the weather, ensuring greater longevity.
